Materials List

- Rhodia pad No.18, or bond paper, or light weight paper, approximately 8 1/2 x 11 inches. Unlined is good.
  - DickBlick has Rhodia. Office supply stores have bond paper.
- Writing tool of your choice
  - Of course it is more fun to write with gel pens, fine liners, and fountain pens.
- Sealing Wax
  - The kind you get will depend on the heating source you plan to use. You may use a candle, a glue gun, or a candle furnace, or just wax with a wick on it. If you use a glue gun you need to get the sealing wax made for that.
  - Many stores have sealing wax, Michaels, Hobby Lobby, DickBlick, plus many on-line stores like Jet Pens, Nostalgic Impressions, JohnNealBooks, Goulet Pens and others.
  - Amazon has nice sets of wax beads, candle furnace and spoon.
- Seal
  - Can be found at the sources mentioned in Sealing Wax above.
- Candle
  - Can be found at the sources mentioned in Sealing Wax above.
- Matches
  - Only needed to light the candle. You don’t need matches if you are going to use a glue gun.
- Xacto knife
  - Used for cutting slits in paper. You may be cutting through many layers.
- Cutting Surface
  - A cutting mat, or a piece of thick cardboard will work.
- Bone Folder (Optional)
  - Used for making crisp folds in paper.
- Paper Clips
  - I use them to stir the wax in my spoon, and to make a stand for the spoon when it is hot. If you are not using the spoon method, you don’t need the paper clips.
- Embroidery Floss
  - A very small amount will be used to wind around one of the letter-locked letters.
